

Stakeholder's financial relations and bank business management efficiency: evidence from Ukraine

Discussion

Piotr Dybka

2017/09/15

Outline of the study

- The key goal of this paper is to evaluate the efficiency of banks in the Ukraine.

Outline of the study

- The key goal of this paper is to evaluate the efficiency of banks in the Ukraine.
- Study is based on a method called Data Envelopment Analysis (DEA)

Outline of the study

- The key goal of this paper is to evaluate the efficiency of banks in the Ukraine.
- Study is based on a method called Data Envelopment Analysis (DEA)

The study divides the sample into 3 categories:

- whole data sample (pooled data set)
- foreign-controlled banks
- domestic capital banks.

Method

The banks are compared with respect to:

- efficiency within homogeneous group of banks
- efficiency within banking system of Ukraine.

The banks are compared with respect to:

- efficiency within homogeneous group of banks
- efficiency within banking system of Ukraine.
- (...) Domestic banks were more adapted to the conditions of the banking business in Ukraine than foreign controlled banks
- (...) in the long-run (i.e. assuming constant return to scale) foreign controlled banks have higher average bank business management efficiency within homogeneous group of banks compared to domestic banks over the period 2008-2013.

Possible extensions

Decomposition of the inputs:

Possible extensions

Decomposition of the inputs:

- *In a sample of 1228 Ukrainian banks* - this is a number of observation over the years 2007-2013 (in each year there is approx. 170 - 180 banks)

- *In a sample of 1228 Ukrainian banks* - this is a number of observation over the years 2007-2013 (in each year there is approx. 170 - 180 banks)
- Table I. - Maximal level of inefficiency is 100%

- *In a sample of 1228 Ukrainian banks* - this is a number of observation over the years 2007-2013 (in each year there is approx. 170 - 180 banks)
- Table I. - Maximal level of inefficiency is 100%
- Figures - I would suggest a based line or lighter color to make them easier to read (or increase the size of markers).
